March 2018

Second Term English Exam

Duration :03h00

part one: Read the text carefully and then do the activities below : (15pts)

Human beings are curious creatures and they have never stopped to tap the immense powers of their intelligence to bring various changes to their life and bring out all sorts of inventions that will help them in their fight for survival.

Some of the realizations they bring into existence are very useful and have produced a positive impact on the fate of the whole species. It is the case with the development of agriculture, the discovery of the vaccines, the improvement brought in the field of construction works and to a large extent in a good number of industrial branches in addition to the sphere of transport.

If, in the past, early men had not given all their attention to encourage agriculture the birth of civilization itself would not have taken place. It is the same truth if we consider the means of transport. For example, Columbus would not have discovered America if sail ships had not existed in his time and then the whole world would not have known any progress without the riches that the new land abounded with. Also, the economic transformation that took place in the 18th century in Europe and elsewhere would not have happened and modified the history of mankind if inventors had not devised the right tools and machines that helped in the rise of production and in the speed and easiness at which items could be manufactured.

The creation of the car around 1880 and its mass production later introduced human societies into quite new era. If the brilliant scientists of that time had not devised such a wonderful thing the conditions of traveling would not have improved and commercial relations and cultural contacts among nations would not have soared at the beginning of the 20th century.

So, the most important things science gave us were security and self- awarness – we figured out how to take care of our physiological needs, as well as our physical needs. Having something to eat the next day, a place to be safe and treatment for a sickness became normal aspects of our lives, . We made the most out of science by initially trying to understand how things worked, and then making them work to our advantage. Science allowed us to create what we wanted.

Wikipedia

A/-Comprehension (7pts)

1)-Are these statements “true” or “false”? (1.5pts)

- a) Human beings would not have become civilized if they hadn't used their intelligence.
- b) Columbus and his men hadn't used the means of transport.
